WebGate WAF

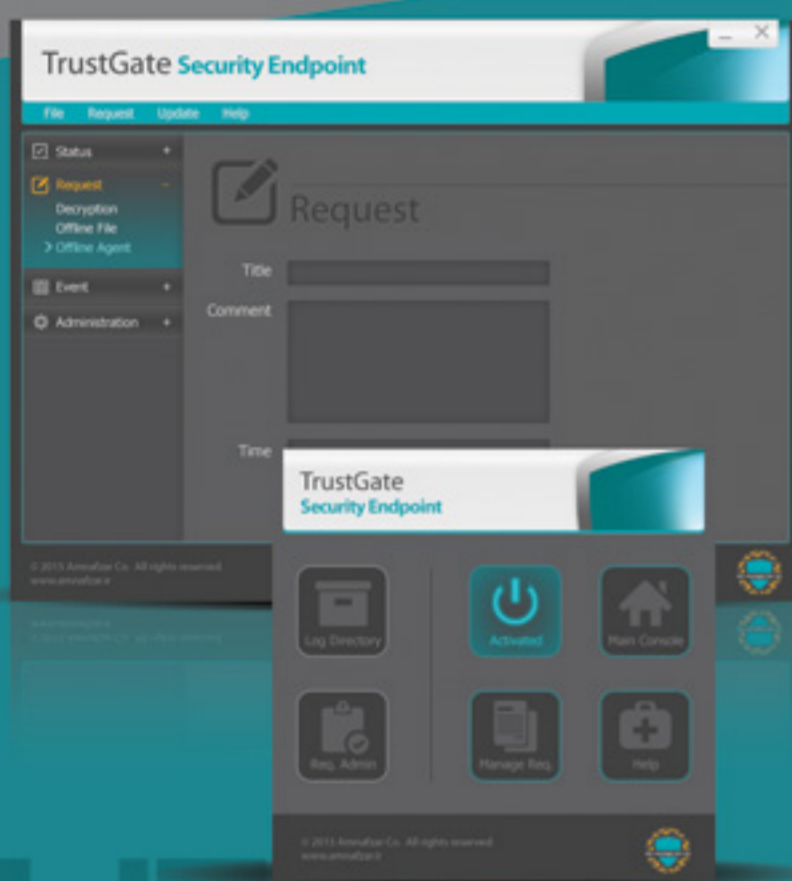

Focusing on application layer threats and the relevant attack vectors, WebGate act as Web Application Firewall (WAF) at the edge of enterprise networks.

It has proven to be an efficient defensive layer against OWASP top 10 web application vulnerabilities.

PrimeAware SOC

A comprehensive Security Information & Event Management (SIEM) solution that enables cost-effective compliance and provides advanced security analytics to identify threats and manage risk, so you can protect your business. Security Alert Processor, Security Systems Database, Forensics Warehousing and Collection and Assimilation are four main building blocks of PrimeAware Security Operation Centre.

TrustGate DLP

Keeping anywhere, anytime data protection logic in the mind, the DLP avoids non-authorized accesses to the stored data and make on the fly data unusable to man-in-the-middle attacks thanks to the strong encryption algorithms support. It also avoids data leakage by controlling common input and output ports.

PKI Solutions

Using our PKI solution, you can bring even more security to your business and take your authentication and encryption mechanisms to the whole new step and makes them more efficient. Bellow are the range of PKI based products you can take advantage of in your network.

- En-Key Smart Token
- Secure Token Manager
- Integrator
- Remote PKCS#11service provider

Services

- Penetration Testing and Security Assessment

As security vulnerabilities and threats grows exponentially, being one step ahead of cyber attackers looks critical. Taking advantage of modern penetration testing skills and vast experiences in both enterprise and service provider environments, our Pentesters can help organisations of any size and with any combinations of ICT technologies to assure their systems security before being compromised by attackers.
